

Product Information	
Product	Anti ASFV P30 monoclonal antibody
Product Code	CAB072
Package Size	1.0mg
Specificity	100% to ASF, no cross reaction with other swine disease virus.
Clone type	Mouse monoclonal
Clone #	3F11
Purification	By protein G
Antigen	Recombinant p30 protein
Form	Lyophilized powder or liquid.
Conjugate	unconjugated
Storage	-20°C for long term storage and normal temperature for shipment.
Product Description	
Description	<p>ASFV is a large, icosahedral, double-stranded DNA virus with a linear genome of 189 kb containing more than 180 genes. The number of genes differs slightly among different isolates of the virus. ASFV has similarities to the other large DNA viruses, e.g., poxvirus, iridovirus, and mimivirus. In common with other viral hemorrhagic fevers, the main target cells for replication are those of monocyte, macrophage lineage. Entry of the virus into the host cell is receptor-mediated, but the precise mechanism of endocytosis is presently unclear.</p> <p>The p30 protein of ASFV is the most abundantly expressed viral protein. It is reported to be antigenic and has recognized phosphorylation, glycosylation, and membrane attachment sites, which also shows that the C-terminal region of p30 is more active than the N-terminal region.</p>
Accession #	NC_001659.2
Gene Symbol	P30
Uniprot ID	CP204L
Application Notes	<p>The monoclonal antibody is only for research purpose.</p> <p>This product has been validated by ELISA, lateral flow immunoassay.</p> <p>Please read the data sheet carefully before experiment.</p> <p>Dilutions shall be determined by customer in their own laboratory.</p>
